

PSD to Wordpress with existing structure

Summary:

A Wordpress website needs a remake. An artist has created a design in Photoshop that shall be adapted into WP. The psd contains Layer Comps so it's very easy to switch between each page in photoshop.

All content is or will be filled by us. It's perfectly fine to fill gaps with lorem ipsum.

Note: Much of the structure has been built using the 3rd party plugin "CMS Tree Page View" meaning in many cases the structure is in fact pages with sub pages. So much of the design will take place using page templating.

Your job is basically to insert the new design into the existing structure.

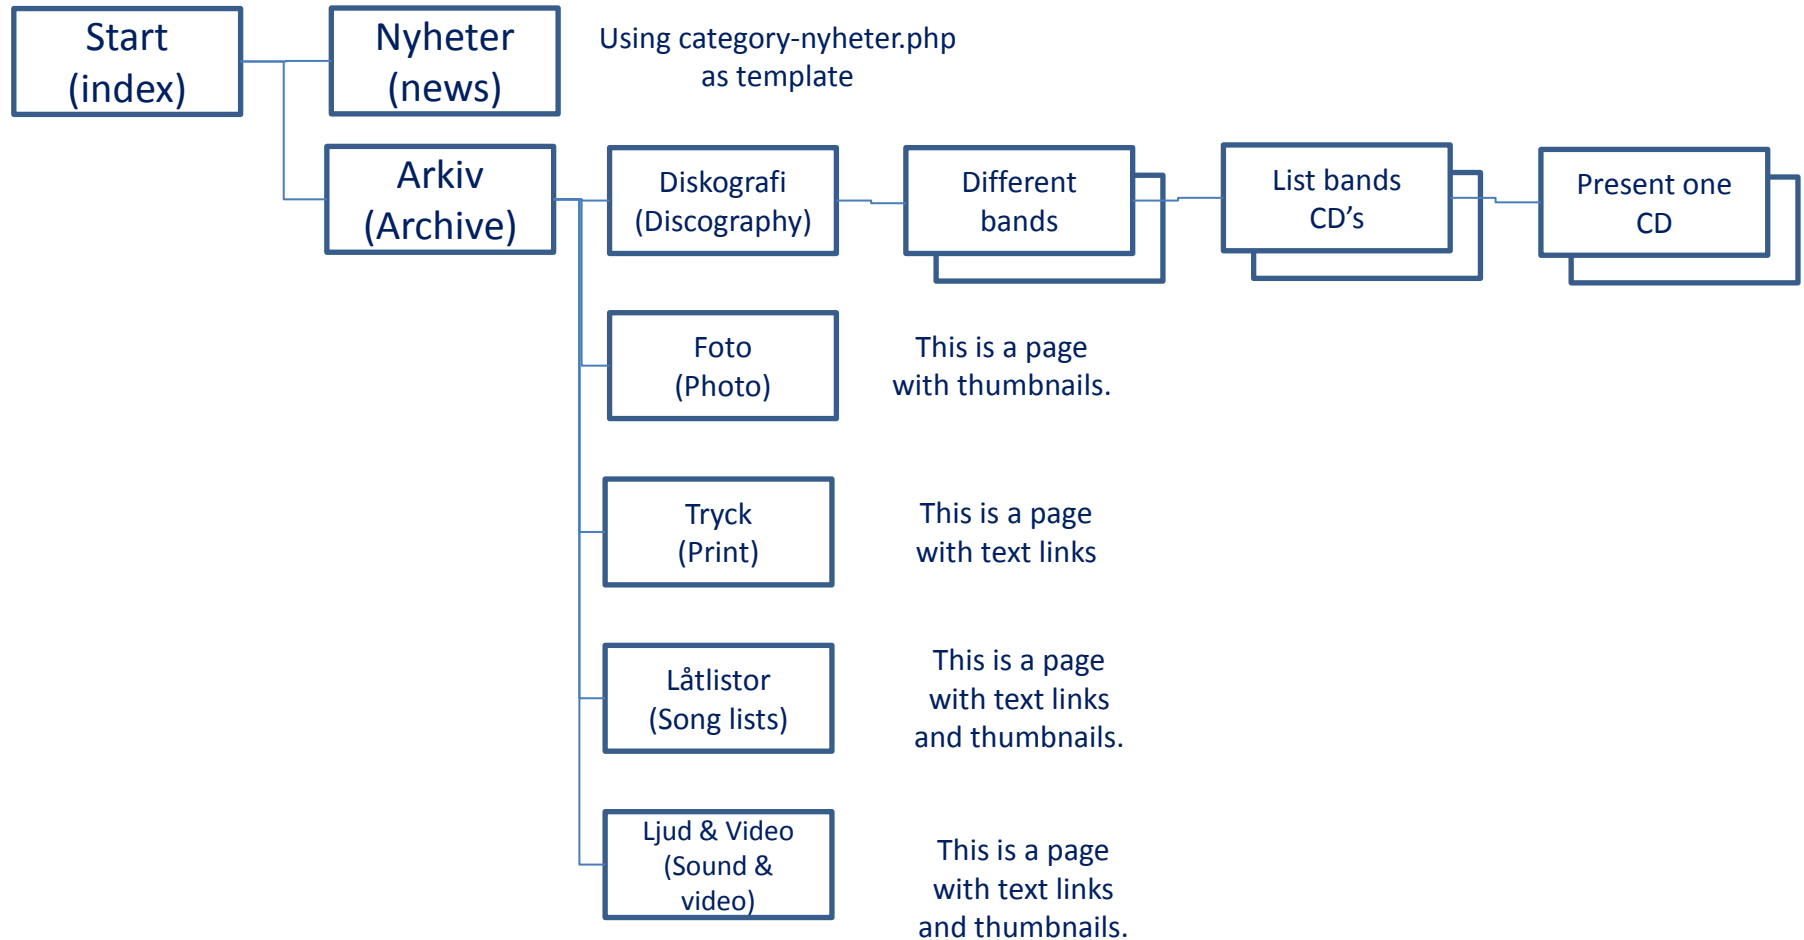

The key elements to design are:

New fonts, new positioning, new menu, new header, on certain pages a sidebar menu in the form of clickable icons, new background for individual sections of the site.

You will be working on a site that is not live so things can go smooth and easy even if mistakes are made.

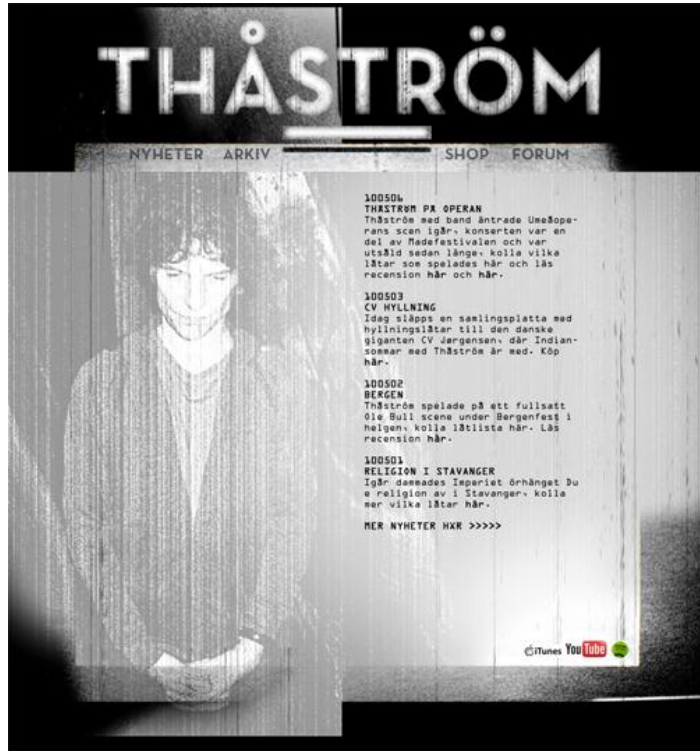

I am reachable via gtalk and gmail and odesk message system. Normally I respond very fast if you have questions (unless I sleep)

Note: All squares are actual pages/archives listings

Start - Index

Start
(index)

This is the start page.

It has a logo.

It has a menu bar (no drop downs).

It has a area with latest entries from news category in excerpts.

At the bottom a text link to the category "Nyheter" (Newz)

Could be built by modifying index.php

Nyheter – News Structure: /nyheter/

Start
(index)

Nyheter
(news)

Using category-nyheter.php
as template

This is the news page.

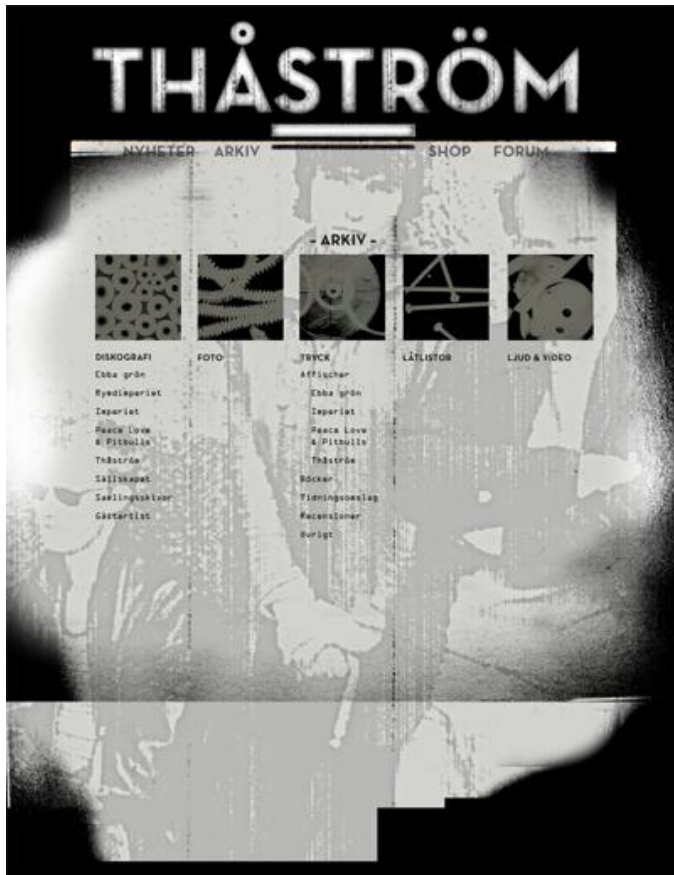

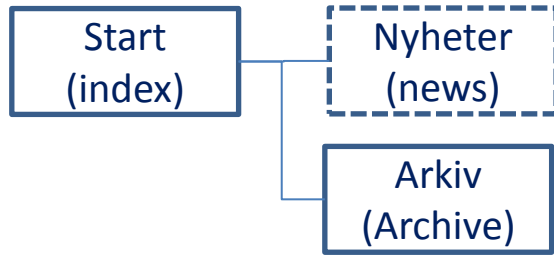

It has pagination 1 2 3 4 5 6 Nästa (Next) for older news items.

Pagination is controlled via 3rd party plugin: WP-PageNavi which is already installed.

This is a modified archive.php template called category-nyheter.php

Som styling + implementing new design is needed.

Arkiv – Archive Structure: /arkiv/

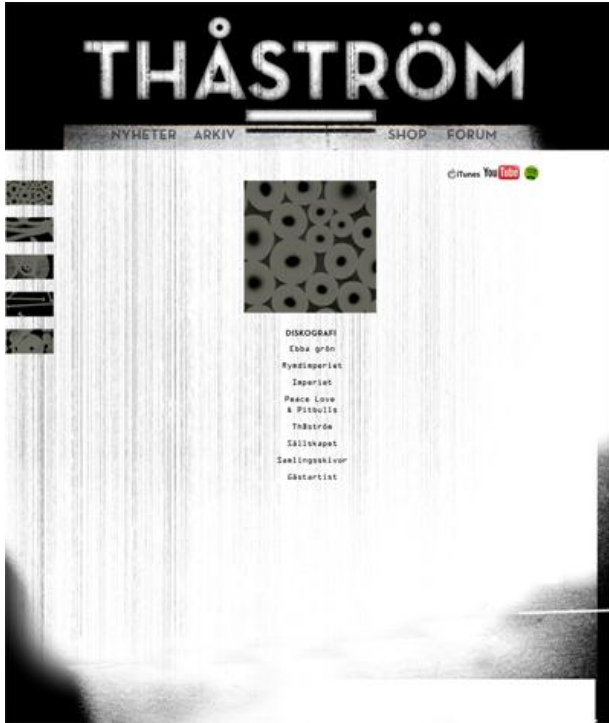

This is the Arkiv (archive) page.

Could be built using a normal WP page. Perhaps with a page template custom made for this page. There are no template for this right now.

Each headline: Diskografi, Foto, Tryck, Låtlistor and Ljud & Video is clickable to a sub page. Subpages are presented on the next pages.

Diskografi and Tryck has "shortcuts" to pages further down in their structure. For example: Ebba Grön could point to /arkiv/diskografi/ebba_gron/

Each icon on top is clickable and lead to respective category (or page).

This is the discography page.

Note the icons to the very left. These are the same icons as on "Archive" page except they are smaller. They should be clickable and lead to their respective category(page).

There are a couple of bands the artist used to play in listed:

Ebba Grön path: /arkiv/diskografi/ebba_gron/

Rymdimperiet path: /arkiv/diskografi/rymdimperiet/

Imperiet path: /arkiv/diskografi/imperiet/

Peace Love & Pitbulls path: /arkiv/diskografi/peace_love_pitbulls/

Thåström path: /arkiv/diskografi/thastrom/

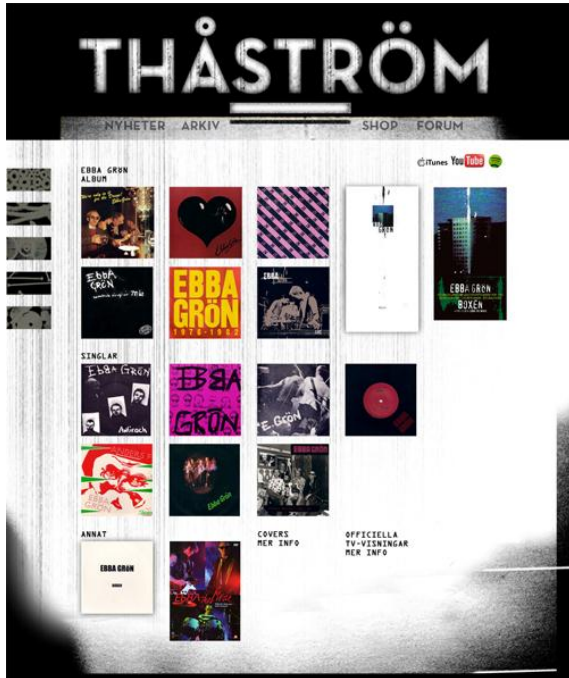

Sällskapet path: /arkiv/diskografi/sallskapet/

Samlingsskivor path: /arkiv/diskografi/samlingsskivor/

Gästartist path: /arkiv/diskografi/gastartist/

These bands are clickable. Example shown on next page.

Uses a template called page-artistlist.php that needs to be changed.

This shows all cd's made by the band ebba grön.

This page lists all albums made by a specific band. This is a normal page using a template called "page-produktioner.php" to automatically display all cd's belonging to this band. The template is already built but may need styling.

These cd's are clickable. Example shown on next page.

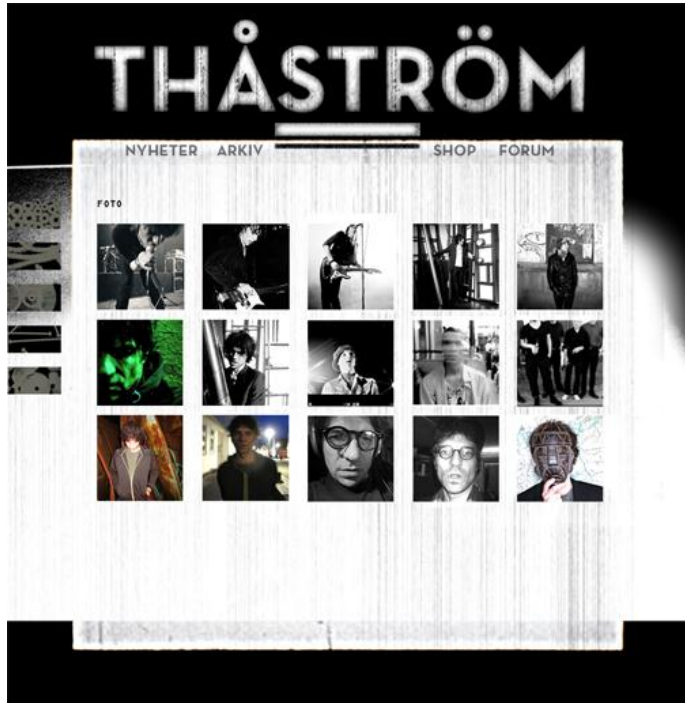

This shows info about a specific cd.

It is a normal page with default template.

The image is generated using featured image from within that page.

We make all these single pages.

Foto (Photo) –Example Structure /arkiv/foto/

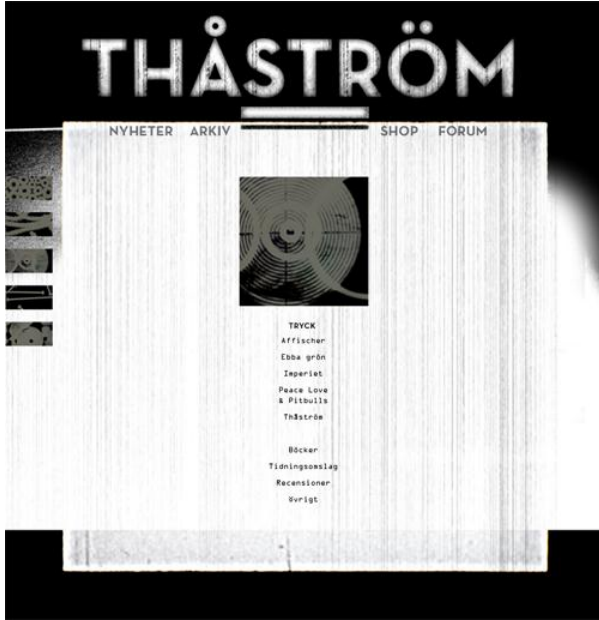

This shows various images in thumbnails.

Note the icons to the very left.

This is a page and it uses a template called foto-gallery.php
Template needs to be edited to fit new design.

The presentation of the images is already been made using
3rd party plugin.

Tryck (Print) –Example Structure /arkiv/tryck/

Uses poster-gallery.php that needs to be edited.

Style + list all sub pages of this page (with link).

Each of the sub pages use post-gallery.php that Generates thumbnails from a gallery plugin.

Låtlistor (Song lists) –Example Structure /arkiv/latlistor/

No image available right now.

Could use a copy of the template used for Tryck (Print) –Example Structure /arkiv/tryck/ on the page above.

Style + list all sub pages of this page (with link).

Each of the sub pages to this page will be normal pages
With default template.

Ljud & Video (Sound & Video) –Example Structure /arkiv/ljud_video/

No image available right now.

This is just a single page with default template.
